SUMMARY

Frontend-focused full-stack engineer with six years of TypeScript experience building React and Angular apps, from reusable component systems to the Node.js APIs behind them. Strong in web performance, accessibility and automated testing, and I build with agentic AI coding tools while holding generated code to the same review and testing bar as my own.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Python, Bash
Frontend: React, Angular, RTK Query, RxJS, Jest, Cypress
Backend: Node.js, Express, REST API design
DevOps: Docker, Kubernetes, Jenkins, GitHub Actions, Git
AI Tooling: Claude Code, agentic AI-assisted development

WORK EXPERIENCE

Japanese Auto Services
Full-Stack Software Engineer December 2024 – Present

- Own the shop's billing platform end to end, from the Angular/TypeScript UI to the Node.js API layer that serves it
- Designed API contracts and the data model for customers, vehicles, jobs and invoices around what the UI needs
- Partner with the owner and front-desk staff to shape feature design and prioritize the roadmap
- Built a responsive, accessible mobile web interface for staff on phones and tablets
- Automated diagnostics, invoicing and pickup notifications in Python, eliminating most manual follow-up
- Build with agentic AI tools, challenging every generated change with automated tests before it ships

Center for Translational Data Science (University of Chicago) Chicago, IL
Frontend Software Engineer October 2021 – September 2024

- Shipped features on the NCI Genomic Data Commons, a cancer research portal with 70,000+ monthly users and 3+ PB of data
- Built a responsive, Section 508 compliant React/TypeScript app from scratch for the VA's genomics research program
- Designed a reusable data table component (search, sort, pagination, data fetching) adopted across several portals
- Improved web performance by migrating data fetching to RTK Query, adding caching and cutting redundant requests
- Led code reviews across multiple frontend repos to keep architecture and conventions consistent
- Built unit and end-to-end test suites in Jest and Cypress to catch regressions before releases
- Packaged apps in Docker and deployed them to Kubernetes, with builds running through Jenkins and GitHub Actions

Pyramid Systems, Inc. Arlington, VA
Software Engineer I October 2019 – September 2021

- Frontend developer on two federal contracts: an Angular app for the SEC and a React app for HUD
- Reworked search in both apps, used by more than 50,000 users
- Resolved Section 508 accessibility issues and fixed defects across both apps
- Integrated UI features with backend REST services and modernized legacy JavaScript
- Demoed new features to product stakeholders at the end of each sprint
- Earned the Key for Performance Award for my work on both projects

FDM Group Reston, VA
Software Developer June 2018 – November 2018

- Turned client wireframes into working prototypes
- Wrote Bash scripts to automate routine email and file handling

EDUCATION & TRAINING

College of William & Mary Williamsburg, VA
B.S. in Applied Mathematics August 2013 – December 2017

Thinkful Engineering Immersion Washington, D.C.
Full-Stack Apprentice January 2019 – May 2019

- Built and deployed React, Node.js and Express apps alongside senior developers
- Wrote tests in Jest and Cypress
