SUMMARY

Frontend-focused full-stack engineer with six years of TypeScript experience, building reliable, polished React apps from reusable design-system components to the APIs behind them. I care about the details people feel: performance, accessibility and interaction quality, backed by automated tests and careful code review. I keep learning and building with new AI technologies, picking up the tools and skills that help me ship better work, faster.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Python, SQL
Frontend: Tailwind CSS, React, Angular, Vite, RTK Query, Three.js
Backend: Node.js, Express, REST API design, Supabase, PostgreSQL
Cloud & DevOps: Docker, Kubernetes, Cloudflare Workers, GitHub Actions, Jenkins, Git
AI Tooling: Claude Code, Codex, Cursor, Ollama (local LLMs)

WORK EXPERIENCE

Japanese Auto Services
Full-Stack Software Engineer December 2024 – Present

- Own the shop's billing platform end to end, setting priorities and the roadmap with the owner and front-desk staff
- Defined how customers, vehicles, jobs and invoices are tracked, shaped around how staff actually work
- Sped up billing by automating diagnostics, invoicing and pickup notifications, and building a tool that turns photos of handwritten job tickets into invoices
- Automated the shop's inspection and emissions billing reports, replacing manual report preparation

Center for Translational Data Science (University of Chicago) Chicago, IL
Frontend Software Engineer October 2021 – September 2024

- Shipped features end to end on the NCI Genomic Data Commons, a cancer research portal serving 70,000+ monthly users and 3+ PB of data
- Architected and built a Section 508 compliant React/TypeScript app from scratch for the VA's genomics research program
- Designed a reusable data table component (search, sort, pagination, data fetching) reused across several portals
- Improved web performance by migrating data fetching to RTK Query with caching, cutting redundant API requests
- Led code reviews across multiple frontend repos, setting the architecture and conventions the team followed
- Built unit and end-to-end test suites that caught regressions before every release
- Containerized apps with Docker and deployed them to Kubernetes through Jenkins and GitHub Actions pipelines

Pyramid Systems, Inc. Arlington, VA
Software Engineer I October 2019 – September 2021

- Delivered frontend features on two federal contracts: an Angular app for the SEC and a React app for HUD
- Redesigned search in both apps, used by more than 50,000 users
- Resolved Section 508 accessibility issues and production defects across both apps
- Integrated UI features with backend REST services and modernized legacy JavaScript
- Demoed new features to product stakeholders at the end of each sprint
- Earned the Key for Performance Award for my work on both projects

FDM Group Reston, VA
Software Developer June 2018 – November 2018

- Turned client wireframes into working prototypes
- Automated routine email and file handling with Bash scripts

EDUCATION & TRAINING

College of William & Mary Williamsburg, VA
B.S. in Applied Mathematics August 2013 – December 2017

Thinkful Engineering Immersion Washington, D.C.
Full-Stack Apprentice January 2019 – May 2019

- Built and deployed React, Node.js and Express apps alongside senior developers
- Wrote unit and end-to-end tests for those apps
